DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-7, 9-16, 19, 21-26, 30-32 and 48-62 are rejected under 35 USC §103(a). This rejection is set forth in the prior Office action mailed on July 01, 2003.

Response to Arguments

4. Applicant's arguments filed on February 27, 2006 have been fully considered but they are not persuasive.

Applicants argue that the claims define over the cited prior art due to the unexpected results in the addition of the different components. The alleged unexpected results are

Art Unit: 1731

presented in Table 2 in which the addition of the debonding agent prior to the latex seems to increase retention.

The arguments are considered unconvincing, because the presented results are not commensurable in scope with the claimed invention, i.e., while the presented results seems to indicate an improvement, there is nothing that indicates that the same results would be obtained throughout all the claimed range. Moreover, claim 1, as claimed, do not necessarily includes a latex or could include a latex at very low addition amount, i.e., the claim limits the addition of the latex to be less than 60 lbs/ton, which includes 0 as the lower end or very little amount, close to zero. Note that the range(s) need to be clearly defined in order to support unexpected results.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure in the art of "Forming Tissues with reduced Slough."
